Centre for Neuro Skills® Educator Publishes CEU Course in Care Management Magazine

Bakersfield, CA (June 12, 2008) –As time becomes a precious commodity in the healthcare industry, Centre for Neuro Skills'® (CNS) own Velda Bryan helps accommodate over-worked Case Managers by offering a written, two-unit Continuing Education Unit (CEU) course on Mild Traumatic Brain Injury (MTBI), recently published in Care Management Magazine.

“In publishing this article on MTBI, Care Management Magazine provides an avenue toward a better understanding of that very puzzling “concussion” patient, while also easing the busy case manager’s necessity for CEU’s,” said Velda L. Bryan, Senior Clinical Specialist/Evaluation Coordinator.

Velda knows the pressures of working in this fast-paced, ever-evolving industry, as she has been involved in the treatment of neurologically impaired children and adults since the 1960’s. By the time she joined CNS in 1981, her focus was exclusively on rehabilitation of acquired brain-injured individuals. She has since become a nationally respected expert in the field of brain injury and travels across the nation educating a variety of audiences.

“Over the past 30 years, the field of neurorehabilitation has never been stagnant and for this reason, continuing education will always be vital for every one of us.”

(MORE)

Bryan's five-page written course, "Mild Traumatic Brain Injury: Identification, Assessment, and Treatment," takes an in-depth look at MTBI, providing those obtaining the available two hours of CE's the following information:

- ? Defining Mild Traumatic Brain Injury
- ? What happens inside the head following MTBI
- ? Symptoms following MTBI
- ? Assessment & Treatment
- ? Neurodiagnostic Tools
- ? Problems with misdiagnosis or missed diagnosis
- ? Taking action: the role of the case manager

"As assessment and rehabilitation possibilities have advanced for the MTBI population, my passion to be educated and to educate has never wavered," said Bryan. "I am happy to report that other professional publications and responsible web-sites are bringing CEU opportunities to an enormous population of over-burdened management and treatment specialists."

Bryan's MTBI course published in the April/May issue of Care Management Magazine is one of many CE approved courses currently available on CNS's award-winning website, www.neuroskills.com. In addition to the courses available on-line, Bryan is one of CNS's 12 nationally respected experts that travel the nation to educate a variety of audiences on over 40 CEU approved presentations on acquired brain injury.

Founded in 1980, Centre for Neuro Skills® (CNS) is an experienced and trusted source of rehabilitation programs for acquired brain injury. With facilities in Bakersfield and Los Angeles, California, and Dallas, Texas, CNS offers intensive, cost-effective and outcome-driven residential, outpatient, and in-home rehabilitation programs for individuals recovering from all types of acquired brain injury. The purpose of all rehabilitation programs at CNS is to reduce disabilities while obtaining the maximum independence and best quality of life in the least restrictive setting for our clients within the realities of the funding support available.
